                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        the adaptor oligos containing the EcoRI sites; i.e. GAATTCGGACTA (beginning) and TACTCCGAATTC (end) removed. Therefore, reported insert length is longer than actual EST sequence length. 359 Std Error: 10.00 Seq primer: T3 Or T7.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        DNA sequencing by: University Core DNA Services, University of
Laboratories) according to the manufacturer's protocol.
2.5 ug of amplified cDNA from 4./3+ cells was mixed with
50 ug of biotinylated ES cell cDNA, denatured by boiling,
and hybridized for 20 h. Double stranded cDNA containing
biotin were removed by streptavidin/phenol treatment as
described [1]. The remaining subtracted cDNA was mixed
with an additional 25 mg of biotinylated ES cell cDNA,
denatured by boiling, and hybridized for 2 h. The
streptavidin/phenol treatment was repeated and the
remaining cDNA was amplified by PCR [Wang and Brown,
1991]. Two additional rounds of subtraction were repeated
exactly as described above. The cDNA obtained from this
subtraction procedure was digested with EcoR1 and ligated
to pBS II SK+ (Stratagene) followed by transformation
into E. coli DH5 cells. Individual colonies were picked
and the corresponding plasmids were isolated either by an
alkaline lysis miniprep procedure [2], or using the
Qiaprep spin miniprep kit (Qiagen). Sequence analysis was
performed using the Big Dye Cycle Sequencing kit and an
ABI373 sequencer (University Core DNA Services,
University of Calgary). 1. Wang, Z; Brown, DD (1991) A gene

Poly(A)+ RNA was prepared from both undifferentiated ES cells and from embryoid bodies which had been cultured for 4 days in the absence of RA followed by an additional 3 days in the presence of 0.5 (M RA (4-/3+ cells). These poly(A)+ RNAs were converted to double-stranded cDNA using the Superscript Choice System (Gibco). Aliquots of both cDNAs were digested with the restriction enzymes Alul and Alul plus RsaI. An adaptor oligo [1] containing an EcoRI site was ligated to the ends of the restricted cDNAs to provide primer binding sites and large amounts of each cDNA population were then produced by the polymerase chain reaction (PCR) as described [1]. Amplified cDNA from undifferentiated ES cells was biotinylated using Photoprobe biotin (Vector
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             rancourt@ucalgary.ca; URL:http://www.acs.ucalgary.ca/

According to the ONFP procedure, clones giving the same hybridisation pattern with a battery of 200 Bmer oligonucleotides are grouped into clusters. One clone per cluster is selected for sequencing. The size of each cluster is an indicator of the frequency of a transcript in the analysed library. The cluster size as well the coordinates of the rest of the clones assigned to the same fingerprint cluster as the clone from which the above EST is generated is available at the amphioxus project site at: http://www.molgen.mpg.de/amphioxus/Clones and filters are distributed via the Resource Center/Primary Database of the German Genome Project (http://www.rzpd.de)

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              5. pGACTAGTICTAGATICGGCCGCCCTTTTTTTTTTTT-3'] from 9.1 ug of total RNA, treated with T4 DNA polymerase, and purified by ethanol-precipitation. The cDNAs were ligated to Lone-linker LL-Sal4, purified by phenol/chloroform, and separated from free linkers by Centricon 100. Then, the cDNAs were amplified by long-range high fidelity PCR using Ex Tag polymerase (Takara) with a primer Sal4-S. The products were purified by phenol/chloroform and Centricon 100. The cDNAs were digested with Sal1 and NotI enzymes and cloned into Sal1/NotI site of pSPORTI plasmid vector. The DH10B E. coli host was transformed with the ligation mixture by the standard chemical method. The average insert size is about 2.5 kb. The library was constructed by Yulan Piao (NIA)."
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       /note="Vector: psPoRT1 (Invitrogen); Site_1: Sal1; Site_2: Not1; Mouse cDNA project by the Laboratory of Genetics, National Institute on Aging (NIA), Intramural Research Program, NIH (http://lqsun.grc.nia.nih.gov/cDNA). This is a long-transcript enriched cDNA library (Ref. Genome Res. 1: 1553-1558 (2001). [PMID: 11544199]). Total RNAs were extracted from a pool of 13 embryos at 8.5-days postcoltum. Double-stranded cDNAs were synthesized with an Oligo(dT) primer [Invitrogen:
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         /tissue_type="whole embryo including

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              Laboratory Mouse DNA Resource

(http://www.jax.org/resources/documents/dnares/). The DNA
was hydrodynamically sheared by repeated passage through a
0.005 inch orifice at constant velocity. The sheared DNA
was blunt end-repaired with T4 DNA polymerase and T4
polynucleotide kinase. Adaptor oligonucleotides were
ligated to the blunt ends in high molar excess. The
adaptored DNA was purified and size-selected for a 9.5 to
10.5 kb range using preparative agarose gel
electrophoresis. Vector DNA was prepared from a derivative
of pWD42 (gi|4732114|gb|AF129072.1), a copy-number
inducible derivative of plasmid R1. The vector was ligated
with adaptors complementary to the insert adaptors and
purified. The sheared, adaptored mouse DNA was annealed to
adaptored vector DNA, and transformed into
Chemically-competent E. coli XL10-Gold (Stratagene) cells
and selected for ampicillin resistance."

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      /CIONE LIDE CONCENTACE
/note POTAGE: Small intestine; Vector: pBluescript II
/note Porgan: small intestine; Vector: pBluescript II
KS(+); Site 1: EcoRI; Site 2: Not1; Modification of
pBluescript II KS(+) [Stratagene] vector to accommodate
cDNA produced with the T-trimmed protocol (Construction of
uni-directionally cloned cDNA libraries from messenger RNA
for improved 3' end DNA sequencing by Glenn Fu, et al.
U.S. Patent # 6,387,624). Cut pBluescript II KS(+) with
NotI and EcoRI. Ligate in double stranded adaptor
containing BsgI and BamHI sites

Bulk tissue was collected from a whole adult individual
from the Tuebingen strain. 1st strand cDNA was primed with
a Not I - oligo(dT) primer, double-stranded cDNA was
cloned into the Not I and EcoRV sites of pExpress-1.
Library was size-selected for >1 kb fragments and
normalized. A non-normalized version of this library is
also available (NHT EGC 10). Library was constructed by
Open Biosystems (Huntsville, AL)"

/dev_stage="embryo 12.5dpc"
/lab host="PH108 (T1 phage resistant)"
/clome lib="WIH_BMAP_F10"
/site_2: Not I; The library was constructed according SonaTdo, Lennon and Soares, Genome Research, 6:791-806, 1996. Denatured RNA was size fractionated on a 1% agarose gel.First strand cDNA, synthesis was primed with oligo-dT primer containing a Not I site. Double strand cDNA was size selected according to mRNA size fraction, ligated with EcoR I adaptor, digested with NotI and then cloned directionally into pYX-Asc vector. The library tag sequence located between the Not I site and the polyA tail is CAGCCACGAC. This library was created for the University Iowa Brain Anatomy Project (BMAP): 'Gene Discovery in the Developing Mouse Nervous System', supported by National Institute of Mental Health (NIMH), Hemin Chin, Ph.D.,
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          12.5%;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    Score 500.2; DB 5;

                                                                                 /note=Torgan: Stomach; Vector: pT7T3-Pac; Site_1: EcoRI; Site_2: NotI; The $225NU16 library was contributed by the Soares laboratory and it was constructed as described by Bonaldo, M.F., Lennon, G. and Soares, M.B. (1996), Genome Research 6(9): 791-806. RNA was prepared from harvested cells of SNU-16 culture. SNU-16 cell was obtained from Korean Cell Line Bank (KCLB). SNU-16 was established from ascitic fluids of Korean patients by Park J.G. et al. (1990), Cancer Res 50: 2773-2780."
